

LIFETIME WARRANTY

CROSS-TORQUE WRENCHES

- Ergonomic twist design allows user to grip the wide side of the wrench body to provide more torque and less stress on hands
- Eliminates the need for a breaker bar for high torque removal and installation applications
- Heavy-duty mirror finish chrome vanadium steel construction provides strength and corrosion resistance
- Meets ANSI/DIN strength and dimensional standards

The two ends are rotationally positioned 90° from each other. This means the contact area of the tool on the hand is greatly enlarged. As a result, hand stress and pain associated with loosening or tightening fasteners is significantly reduced.
